

# Conclusions - ET Advancements

## **Directed Energy**

Beams from UFOs are used to disable missiles, take measurements (beams directed to the ground or water), levitate objects, or used as a defensive weapon. More advanced and powerful than human directed energy weapon (DEW) programs.

## **Psychological/ Mind Control/ Understanding of Human Brain**

Aliens are able to change mood (fear to calm), suppress memory of events (forced amnesia), upload information to the mind, insert screen memories in an attempt to mask events.

## **More advanced communication methods**

What is described as telepathy in close encounters with occupants and alien abductions.

## **Propulsion**

UFO craft using a type of field propulsion are more advanced than human aircraft and helicopters. UFO craft appear to be space faring not requiring combustion rocket liftoff in order to achieve escape velocity.

## **Advanced Fabrication**

People report silvery metallic craft with no seams or riveting like shaped out of mold. Similar to what humans are starting to realize today with 3D printing. Perhaps fabricated in the vacuum of space or a molecular level.

## **More Advanced Power Consumption**

An obstacle in today's directed energy weapon (DEW) programs going back to the SDI program is the high amount of power consumption required. That does not seem to be a problem in UFO sightings of what appear to be advanced alien craft concluding that these craft have tapped into to more power and a more efficient use of energy.

## **Medical Breakthroughs, Genetic Engineering, Space Faring Eugenics**

More advanced medical procedures, even curing ailments reported in abductions. Human-alien hybrids are reported.

## **More advanced space travel**

People report travelling vast distances in a short amount of time inside UFO craft.
